

My Professional Goals

After two weeks of training, there are so much I learnt from this program. How to design your class to effectively deliver class? How to monitor teacher's instruction language to have flooded input and also have function to let students to have more output?

I think I will have a better understanding of online class instruction, not the coach. If there is a chance to be an online teacher, I think I will be more motivated than before. Also it is a trend to have online class recently. I would love to registered to be a certified online teacher. I also think this experience in UVA will help me to fit in other STARTALK teacher program, because I can live with the challenge I need.

In my own class, I will monitor myself more based on the standard I learn in this class so when nobody can help me to analysis my class, I can use the observation form to analysis myself. I think it will be a big benefit for me that I can improve my teaching day by day. And I can use what I know I can improve on the next day to try it out. This could be a big asset for me to improve my lesson designing and delivering.

Since I will teach Level 1 and level 2 students in my new school, I have an idea of what language proficiency they should complete at the end of level 2, so I can prepare them to attend the UVA or other STARTALK student program better next time.
